

AgriChemWhey

An integrated biorefinery for the conversion of dairy by-products to high value bio-based chemicals.

## THE PROJECT AND ITS OBJECTIVES

AgriChemWhey will establish a first-of-a-kind, industrial-scale biorefinery to valorise dairy waste to several high added value bio-based products for growing global markets by:

- Optimising and scaling-up the innovative fermentation process
- Proving the techno-economic viability of the biorefinery
- Integrating symbiotic industrial and agricultural value chains

## IMPACT

Environmentally friendly approach

- CO<sub>2</sub> savings and greater resource efficiency
- Increase sustainability of the European dairy industry

Socio-economic and development driven force

- Creation of new value chains through industrial symbiosis
- Rural community development
- Regional development, in regions facing industrial transition through the replication the AgriChemWhey model
- Growth and competitiveness of a European circular bioeconomy
